Skills

JavaScript · Next JS · React JS · React Native · Redux · TypeScript · Flutter · Cubit · CSS
Java · Spring boot · Python · Node JS · PostgreSQL · MySQL · Firebase · AWS
Git · CD/CI · RESTful · Mockito · Cypress · RTL · Docker · Protobuf · GRPC

Education

Bachelor's in Computer Engineering · University of São Paulo (USP)

Languages

Intermediate english

Experience

Rei do Pitaco – Oct/2024 to Feb/2025

- Developed dynamic interfaces, creating screens and dynamic pages from protobuf contracts, using the GRPC pattern for requests, ensuring higher scalability and performance in server communication.
- Developed a Know Your Customer (KYC) flow for both mobile and web, integrated with facial recognition tools to prevent fraud.

Technologies: TypeScript, Flutter, NextJS, GRPC, Protobuf, Cubit

Quinto Andar – Nov/2020 to Sep/2024

- Integrated rental insurance payment with Pix at the time of technology launch, making it the most used payment method on the platform to this day.
- Developed a platform to manage key deliveries, visits for brokers and owners, and communication between involved parties, reducing friction and increasing conversion in the rental journey for properties without doormen (most of the country).
- Developed a 3P platform for real estate listings, integrated with Quinto Andar, enabling fast export of ads to our platform. This allowed any real estate agency to publish properties and reach all our users, increasing rental speed and expanding supply.
- Led the deprecation of the old design system, followed by code adjustments to adopt the new design system, reducing friction in creating new components with a much better-documented and responsive library, speeding up the engineering process.
- Integrated the login system of an acquired company to Quinto Andar for operations in the Mexican market, allowing account migration or association with our user base, significantly reducing friction in migrating the customer base to our system.

Technologies: React, Next, Redux, TypeScript, Spring Boot, PostgreSQL, Firebase, AWS

Monitora Tech – Mar/2020 to Nov/2020

- Developed a management platform for the hiring company, featuring functionalities such as electronic time tracking, individual work reports, and route planning for drivers.

Technologies: React Native, Spring Boot, MySQL, SASS

B2W – Jan/2020 to Feb/2020 (Internship)

- Developed a chatbot integrated with the company's Workspace aimed at speeding up communication and collecting feedback from employees.
- Integrated with Google Sheets and Docs to facilitate data visualization and documentation.

Technologies: Python
